DETAILED ACTION

1. Claims 1-3, of US Application No. 10/542,818 filed on 07/20/2005, are presented for examination.

Priority

2. Acknowledgment is made of applicant's claim for foreign priority under 35 U.S.C. 119(a)-(d). The certified copy has been filed in parent Application No. SE 0300332-4 filed on 10 February 2003.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claim 1 rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The alternative language "or" in lines 17, 18, & 22 of page 3 and line 13 of page 4 of the claims renders the claim indefinite.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. As best understood by the examiner, claims 1-3, is rejected under 35 U.S.C. 102(b) as being anticipated by Wegler (5,802,802).

7. Regarding claim 1, with reference to Fig. 17D, 21A, and 21B, Wegler discloses an arrangement at a beam or building (arrangement of truss beams) comprising 2 chord beams with at least one cast cord in which the strengthening truss beams contain a beam web assembly consisting of truss web members; wherein the truss web members, when seen in a longitudinal direction of the cord, form a zigzag pattern; with the beam

web assembly having several truss web members consisting of a rod bent into a triangular shape. Each truss member having hook like bends in both ends (Fig. 17D), the bends being mirror images of each other, a middle part of said web member being straight and forming a base in said triangle shape member. (Col. 5, Line 24-32).

8. Regarding claims 2-3, these claims are product-by-process claims. Even though product-by-process claims are limited by and defined by the process, determination of patentability is based on the product itself. The patentability of a product does not depend on its method of production. If the product in the product-by-process claim is the same as or obvious from a product of the prior art, the claim is unpatentable even though the prior product was made by a different process. See MPEP 2113.

Conclusion

9. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
